

LANsurveyor[®] Express

FOR MICROSOFT[®] VISIO[®]

Automatically Create Network Diagrams in Microsoft Visio 2007

Never map your network by hand again — let LANsurveyor Express for Microsoft Visio automatically create network diagrams for you in Microsoft Visio 2007! Fully integrated as a Visio add-on, LANsurveyor Express is easily accessible from the Visio toolbar, making it easier than ever to get a comprehensive network map in just minutes!

“LANsurveyor works flawlessly. Every one of our computers, networked printers, routers & switches were automatically diagrammed. We purchased LANsurveyor because it’s powerful, easy to use, & cost effective.”

— Jason Griffith,
Information Systems Specialist,
West Virginia Dept of Agriculture

LANsurveyor Express uses a unique, multi-level discovery method to identify every IP device on your LAN or WAN, including routers, switches, printers, servers, and workstations.

LANsurveyor integrates OSI Layer 2 and Layer 3 topology data (including switch port connections) and displays network nodes in a Visio diagram, complete with colored lines representing connection speed and labels indicating the switch port information for nodes connected to your network.

LANsurveyor Express uses Visio SmartShapes[®] to represent your network devices and populates each node’s custom properties with the node’s IP address, network name, and fully-qualified domain name. This feature enables you to use Visio’s built-in network device reports.

If your organization requires up-to-date network documentation for compliance audits, internal support, network security, or troubleshooting, let LANsurveyor Express automatically generate accurate, complete network diagrams for you.

Easy to Use

Simply enter your IP address range and SNMP community strings and let LANsurveyor Express do the work for you. Survey your entire LAN and WAN or just specific network segments.

Complete

LANsurveyor Express uses multiple discovery methods (including SNMP, ICMP/ping, NetBIOS, Active Directory[®], Spanning Tree, and more) to identify all your network devices.

Integrated as a Visio Add-On

LANsurveyor Express is fully integrated with Visio as an add-on, ensuring that the product is always easy to access via the Visio toolbar. Additionally, LANsurveyor Express automatically populates Visio Smart Shapes with node information so you can run Visio reports with LANsurveyor Express data.

Need additional functionality? Consider upgrading to LANsurveyor, which offers real-time, automatic updates to network maps and identification of rogue devices using a unique continuous scan feature that immediately detects new devices on the network. Additionally, LANsurveyor delivers powerful inventory management features and satisfies PCI and other regulatory requirements.
