

Systems Management Bundle

Pinpoint the Root Cause of Application Problems in Seconds

“ If a network guy is pointing a finger to a virtualization or a storage person, we can now integrate all of those products together in one dashboard (AppStack™) and understand what’s happening in each of them. ”

— Kasey Kollar
Program Director of Technology,
Bucks County Intermediate
Unit #22

SolarWinds® Systems Management Bundle delivers visibility across your systems environment—from applications to servers, virtualized infrastructure, and storage systems—to help you diagnose and troubleshoot performance problems faster. Systems Management Bundle combines the goodness of four products from SolarWinds—all integrated to deliver single-pane-of-glass visibility on the SolarWinds Orion® Platform.

- » Server & Application Monitor
- » Virtualization Manager
- » Storage Resource Monitor
- » Web Performance Monitor

The Systems Management Bundle consolidates monitoring insight from all four products and presents data in the form of an intuitive application dependency map, allowing you to visualize relationships between applications and underlying IT infrastructure components.

- » The AppStack dashboard provides application dependency and status
- » The PerfStack™ dashboard allows for drag-and-drop performance correlation

SYSTEMS MANAGEMENT BUNDLE AT A GLANCE

The Systems Management Bundle provides:

- » End-to-end visibility across various technology silos
- » Support for multiple technology vendors
- » Pre-built integration, including automated and contextual visibility that extends management across apps, database, server, virtual layer, and storage infrastructures
- » Quick and easy setup and customization; add the dashboard to your NOC view in no time

APPSTACK AND PERFSTACK DASHBOARD DIFFERENTIATORS

The AppStack and PerfStack dashboards work together help to pinpoint and correlate application and system performance bottlenecks. The AppStack dashboard dynamically links applications and its dependent infrastructure highlighting node status. The PerfStack dashboard expands upon AppStack by allowing you to drag, drop, chart, and correlate these application and infrastructure nodes in a single timeline. Using a timeline slider, you can go back in time to identify patterns and help define what's normal. Networking nodes can also be added for performance analysis while using the PerfStack dashboard.

Server & Application Monitor

Comprehensively monitors the health and status of multi-vendor server hardware and hundreds of applications out-of-the-box including SQL Server®, Exchange™, IIS™, Active Directory®, Office 365®, and more. See a list of supported applications [here](#).

- » Proactively manage IT hardware and software assets with built-in IT asset management capabilities
- » Monitor the availability, high-level CPU, and memory of VMware® and Hyper-V® hosts and virtual machines to provide basic statuses
- » Support hybrid IT environments with built-in AWS® infrastructure monitoring and the ability to deploy into cloud provider via agent or agentless deployment

Virtualization Manager

- » Performance monitoring, capacity planning, configuration, VM sprawl detection, VDI, and chargeback for troubleshooting and optimizing a VMware or Hyper-V environment
- » Alerts about configuration issues and performance problems across virtual clusters, hosts, and datastores
- » Uses baseline thresholds to alert on performance discrepancies on clusters, hosts, VMs, and datastores
- » Actionable intelligence provides recommendations for optimal server performance and placement

Storage Resource Monitor

- » Real-time storage performance visibility into heterogeneous SAN and NAS arrays
- » Storage monitoring capabilities for LUNs, disks, storage pools/RAID groups, storage arrays
- » Comprehensive alerting and reporting capabilities for reporting on configuration and asset information, storage grouping, etc.
- » Multi-vendor array support for most major storage vendors including EMC®, NetApp®, Dell®, and LSI arrays

Web Performance Monitor

- » Monitoring of user experience and overall performance of websites and web applications
- » Detailed information about website load times, front-end components, user experience for complete transactions, page load speeds by location, heavy page elements, etc.
- » Agentless user experience testing from multiple locations inside or outside your firewall

Systems Management Bundle Deployment Guide

For more information about solution prerequisites, technical specs, configuration, and customization, please see the [Systems Management Bundle Deployment Guide](#).

TRY BEFORE YOU BUY. DOWNLOAD A FREE TRIAL!

Don't just take our word for it. At SolarWinds, we believe you should try our software before you buy. That's why we offer free trials that deliver full product functionality. Simply download and install the software, and let the wizard help you discover your applications and underlying infrastructure. Once complete you will have out-of-the-box dashboards, alerts, reports, and more. It's just that simple.

ABOUT SOLARWINDS

SolarWinds provides powerful and affordable IT management software to customers worldwide, from Fortune 500® enterprises to small businesses, managed service providers (MSPs), government agencies, and educational institutions. We are committed to focusing exclusively on IT, MSP, and DevOps professionals, and strive to eliminate the complexity that our customers have been forced to accept from traditional enterprise software vendors. Regardless of where the IT asset or user sits, SolarWinds delivers products that are easy to find, buy, use, maintain, and scale while providing the power to address key areas of the infrastructure from on-premises to the cloud. This focus and commitment to excellence in end-to-end hybrid IT performance management has established SolarWinds as the worldwide leader in both network management software and MSP solutions, and is driving similar growth across the full spectrum of IT management software. Our solutions are rooted in our deep connection to our user base, which interacts in our THWACK® online community to solve problems, share technology and best practices, and directly participate in our product development process.
